# KARBULLAH POLL MERINOS

## WELCOME

### Our Rams, more lambs.

We are seeing the results of the blood, sweat and tears we have devoted into several key areas of our stud operation. Fertility, lamb survivability, worm resilience and outstanding wool quality are the 4 areas we are most passionate about and have the potential to change the profitability and sustainability of not just our own flock, but most importantly, the flocks of our client's that mean so much to us.

Ewe Rearing Ability (ERA) is a new breeding value we are focusing on now and will have a significant impact on both our own and our clients' flocks. The higher the ram's ERA, the more lambs his daughter will successfully rear. Our ERA sale average for this year is in the top 10% in the country, this is validation that year's of hard work in improving fertility has paid off.

We consistently scan over 140% in our stud ewes (including maidens) and record an average 10% lamb loss. Last year (2022 drop) we achieved 9.5% lamb loss and 133% lambs marked - this is unheard of in Merinos and something we are extremely proud of.

Another game changing trait we have zeroed in on over the last decade but has really come to the fore during the last few wet seasons is worm resilience and resistance. 49% of the sale team sitting in the top 30% in Australia for WEC. Finally, we have made huge gains in our wool quality over the last few years, introducing a lot of SRS genetics to improve the density, lustre, and softness of our fleeces. 81 rams in this year's sale team have tested at 100% for comfort factor. This is truly an outstanding drop of rams we are proud to offer you this year.

Also with the introduction of four outside rams and one of our own rams used at Glenwood, it has been a great year for benchmarking ourselves against other studs. This is vital for making sure that the ASBV's accuracy is as good as possible. With an example of our YWT sale average increased from 6.5 to 8.2 and along with PWWT going from 4.2 to 5.9. This helps to allow you to know exactly what you're purchasing at sale time.

**This is truly an outstanding drop of rams we are proud to offer you this year.**

- FERTILITY + SURVIVABILITY
- MUSCLE + FAT
- WORM RESILIENCE
- WOOL QUALITY
- TEMPERAMENT
- PROFIT DRIVERS

## KARBULLAH MERINO STUD

### Some pointers from the team at Karbullah

- When choosing your rams, always remember that each ram will have an effect on your flock for at least 7 years directly, as you will use him for at least 3 years and his daughters for another 4 years.
- When choosing for CFW always remember that it takes energy to produce that extra fleece weight. Keep that in mind as more lambs will produce you much more fleece than any extra CFW will.
- Muscle, fat and ERA have the biggest effect on the Dams ability to successfully birth and raise lambs. As the ability to store energy for lambing is highly connected to three traits this should be your first port of call when choosing a ram.
- Have fun in choosing your ram and we would love to see you on sale day. If you are unable to make it we are making your buying experience as easy as possible with videos, photos and a **ClassiMate** physical assessment that you can access through the **QR code on the front page** and **farmgateauctions.com.au**.
